HMSC pencil nozzle, .014 in orifice

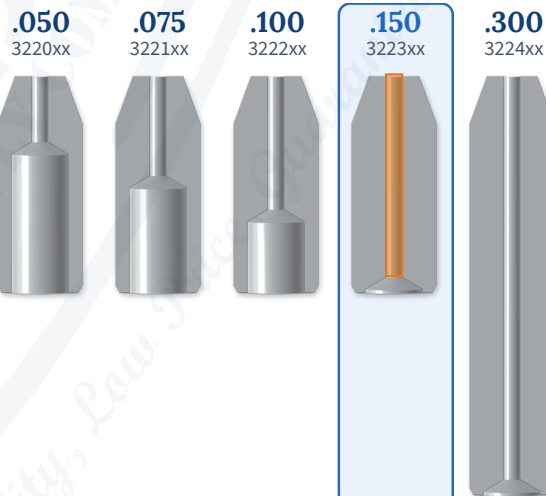

## Specifications

|                   |                                                |
|-------------------|------------------------------------------------|
| Nozzle type       | Pencil (straight), single orifice              |
| Orifice diameter  | .014 in                                        |
| Orifice tolerance | ±.0005 in                                      |
| Engagement length | .150 in                                        |
| Nordson series    | 322 3xx (old 237 6xx)                          |
| Materials         | Phosphor brass body, stainless steel insert    |
| Marking           | Orifice size on the lower half of the hex face |
| Fits              | All H200 modules                               |
| Store SKU         | T3B23A4S                                       |

## Insert cutaway

Cutaway, .150 in engagement: the stainless steel insert pressed into the phosphor brass body

The five insert sections at one scale, this nozzle framed. **Orange:** the orifice bore, .150 in on this nozzle. The renders show the .012 in orifice.

Engagement length is the length of the small orifice bore inside the insert. The .050 to .150 nozzles look the same from outside, so confirm with the part number on the package or your order history. The .300 nozzle has a visibly longer tip.
