Order the basic kit complete as T10B83C2S, or the parts one at a time.

Service

- Change the pump filter on a schedule.
- Relieve pressure before removing the filter.
- After a tank flush, install a new pump (tank) filter.
- Use inline hose filters or filtered modules on small orifices (.008 and .012).

Hot melt, heated parts and adhesive under pressure cause burns. Wear heat resistant gloves, safety glasses and long sleeves. Relieve system pressure before opening any fitting, filter, module or nozzle.
